ATAR

Make fashion returns verifiable, faster and less costly.

A proposed pilot for fashion retailers, marketplaces and returns operators

- **Earlier verification**
- **Lower reverse-logistics cost**
- **Faster refund & resale decisions**
- **Better traceability & evidence**

THE CHALLENGE

Returned fashion items often move through expensive reverse-logistics networks before their identity and condition are verified. Late inspection delays refunds, resale and dispute resolution. Individual parcels and unnecessary packaging add handling and transport cost.

WHAT WE PROPOSE

1. **Drop-off**
   Customers hand over eligible fashion items without shipping boxes at participating return points.
2. **Guided inspection**
   Human inspection, supported by AI, captures item identity, condition and evidence.
3. **Consolidation**
   Accepted items are grouped into reusable transport boxes.
4. **Smart routing**
   Items are sent to the retailer, warehouse or another agreed destination.

WHAT WE WANT TO VALIDATE

We want to test whether earlier inspection and consolidation can reduce cost per returned item and time to resale, while improving traceability and the quality of decisions on refunds, disputes and disposition. These are hypotheses to validate, not proven performance claims.

A PRACTICAL PILOT

Scope

One agreed product category and one return flow, at a small number of staffed points.

Pilot design

Duration and volume jointly defined after reviewing operational constraints.

Comparison

Pilot process versus current process.

Example success metrics

Total cost per item, inspection accuracy and exceptions, time to verify condition, transport/ packaging cost, and time to resale or final disposition.

WHAT WE NEED FROM A PILOT PARTNER

- An operational owner
- Access to a limited real-world return flow and baseline process data
- Agreement on inspection rules, privacy safeguards, exception handling and success criteria
- Collaboration to scope integration and commercial terms before launch

NEXT STEP

If there is a potential fit, we would welcome a short discovery call to assess the pilot. If there is mutual interest, we can define the pilot scope and prepare a non-binding Letter of Intent (LOI), subject to feasibility, legal review and a definitive agreement.

About Atar | Founded by operators who previously scaled a parcel delivery and pickup network to more than 1,500 points and over 8 million parcel deliveries.
